An aerial photograph of a tall, blue metal telecommunications tower. The tower is situated in a vast, dense green forest. The tower has a lattice structure and is topped with several large, white, rectangular antenna arrays. The sky is clear and blue, and the horizon is visible in the distance. The overall scene is a mix of natural landscape and industrial infrastructure.

We see the future. Yours.

A close-up photograph of a worker wearing a white hard hat and an orange safety vest with 'visionstream' written on it. The worker is focused on a piece of network equipment, using a flexible black cable. The background shows an outdoor setting with trees and another worker in the distance. The text is overlaid on the left side of the image.

Our market-leading, innovative solutions are driving the future of the services industry. Working with you, we will create network solutions that are faster, smarter, better integrated, more resilient and more efficient. Together, we will future proof Australia and New Zealand's most important infrastructure networks.

Service, not just services...

Visionstream partners with customers to develop smart, tailored solutions. Our solutions enhance the quality of mission critical telecommunication and information and communications technology (ICT) assets. We work to meet and exceed our customers' expectations, offering end-to-end innovative and agile solutions that solve the toughest challenges.

Visionstream's innovative services span the design, supply, construction, installation, commissioning and maintenance of:

- Fibre and copper networks, as well as distribution and transmission networks
- Mobile and radio transmission networks, including emergency alerting
- Intelligent infrastructure networks for road and rail
- Digital platforms and ICT components for hospital and campus networks
- Telepower systems including Uninterrupted PowerSupply and lifecycle management
- Critical infrastructure services to enhance resilience and improve the reliability of networks
- Emergency and critical networks management through 24/7, 365 day a year Network Operations Centres (NOCs)
- Facilities management of telecommunication and ICT
- Robust operations and maintenance programs.

Underpinning this expertise is a national team dedicated to quality and safety, extensive project management methodologies, established and scalable systems, and proven in-house technical design and engineering capabilities.

We make your goals our goals, for long-term, cost-effective outcomes that add real value.

ream

And partnership, not just service.

Working with Visionstream, you'll notice some real differences in the way we work with you.

We take responsibility.

We've been providing solutions to customers for more than 20 years and our reputation has been built on transparent and honest relationships. We're not afraid to be upfront, and our customers see us as a true and valuable partner.

We collaborate for your success.

We're trustworthy and there when you need us. We take the time to fully understand your unique challenges, aligning our goals with your goals. We work with world-class partners, supported by market-leading systems to ensure our customers benefit from the best thinking in the industry.

We pioneer innovative solutions.

We're constantly challenging ourselves to find new and innovative solutions that create market leading outcomes and value for our customers, communities and shareholders. Our single focus is to help our customers find the best possible project outcome and improve the way their assets function and operate.

We adapt to your needs.

We know the work environment never stays the same and our customers' needs change too. That's why we never take a one-size-fits-all approach. We're always looking for new and better ways to achieve more with less, to ensure smart, cost effective and differentiated solutions. We aim to enhance the quality of our customers' assets, while never compromising safety or quality.

Our unique end-to-end service offering gives us extensive capability and experience across a broad range of sectors, delivering some of the largest and most complex nation-building telecommunications and ICT projects.

Experience. Expertise. Excellence.

As a market-leading technology solutions provider, we work with clients across six key sectors to deliver outcomes that improve the way businesses and communities work, live and play. The results speak for themselves.

Carrier

We provide whole-of-life solutions from design to build, integration and ongoing maintenance of the asset to ensure value and drive network efficiency. Having built and maintained many of the largest fibre optic and mobile networks in Australia and New Zealand, Visionstream has the experience and expertise to provide comprehensive carrier and ISP solutions.

Government

Visionstream partners with government to deliver the next generation of mission critical infrastructure. We provide end-to-end service across audit and inspection, design, construct, and operations and maintenance for Whole of Government Radio Networks for Public Safety and Security, and critical public utility infrastructure monitoring and control.

Health

We work with health sector operators to deliver efficient solutions that help to cut costs and improve patient care. Our customised approaches reduce the number of interfaces for clinical employees, improve system interoperability and ultimately, increase clinicians' time with patients.

Through our Visionstream Imatis Joint Venture, Imatis Australia, we deliver a world-class unified user interface solution that connects people with information and workflow. The result is an approach to healthcare that is focused on better patient outcomes, quality and safety through patient and doctor self-service; mobility; effective patient flow; and lean logistics management.

Resources

Visionstream has built trusted partnerships with large global customers across the natural resources sector. We design, construct, operate and maintain critical ICT networks and infrastructure that ensures connectivity to mission critical mining operations and links to remote operations centres. Our teams have extensive capabilities in resource-specific design, construction and operation, of asset critical networks including the installation of wireless networks that support large autonomous fleets, optical fibre cable networks to connect inter-mine operations and communications backbones, systems integration, and remote connectivity.

Transport

We work with public and private sector operators to deliver innovative and sustainable solutions in the design, construction and operation of nation building intelligent transport systems (ITS). Our state-of-the-art systems allow our customers to make more informed decisions while optimising their network's performance and maintenance spend and ensure drivers are benefiting from the best, real-time information available.

Rail

Visionstream partners with public and private sector rail network owners and operators, major mining companies with dedicated rail networks and construction companies, to ensure the effective and efficient running of this country's rail corridors and networks. Our fully integrated, end-to-end communications solutions, for both greenfield and upgrade rail projects, help to optimise the performance of communications and critical infrastructure networks, without compromising on quality or efficiency.

Connection. Innovation. Transformation.

With more than two decades of industry experience, we have an impressive track record delivering customer-driven solutions for major projects across Australia and New Zealand.

Together with our customers Visionstream is:

- Enabling Australia's digital future by working as nbn's partner to design, construct, commission and integrate this critical infrastructure for businesses and communities across the country.
- Helping the South Australian Government to build Australia's most technologically advanced patient-centric health facility at the Royal Adelaide Hospital. We implemented integrated technology solutions that increased clinician-patient time, by reducing menial and administrative tasks.
- Delivering Australia's second largest fibre optic network, by partnering with Nextgen to design and build the Nextgen network with almost nine thousand kilometres of cable.
- Creating social benefit by enabling greater access and faster internet speeds for New Zealand businesses and communities through the design, build and roll out of New Zealand's Ultra Fast Broadband and Rural Broadband.
- Providing safer and more responsive emergency alerting systems across Victoria, by partnering with the Emergency Services Telecommunications Authority to design, construct and install the mission critical Emergency Alerting System Network. We work with satellite links, optic fibre links, wireless ground base stations and robust monitoring and feedback systems, as well as provide ongoing operations and maintenance.
- Facilitating a safer and faster journey for Australian drivers through intelligent transport solutions, gantries and variable message signs on highways across the country.

A safe pair of hands.

We know that contemporary workforce management means not only getting the job done, but getting it done safely and without harm to the environment.

We are dedicated to the safety of our people, project partners and the communities in which we work. We have an excellent reputation and a strong record of safety and environmental performance.

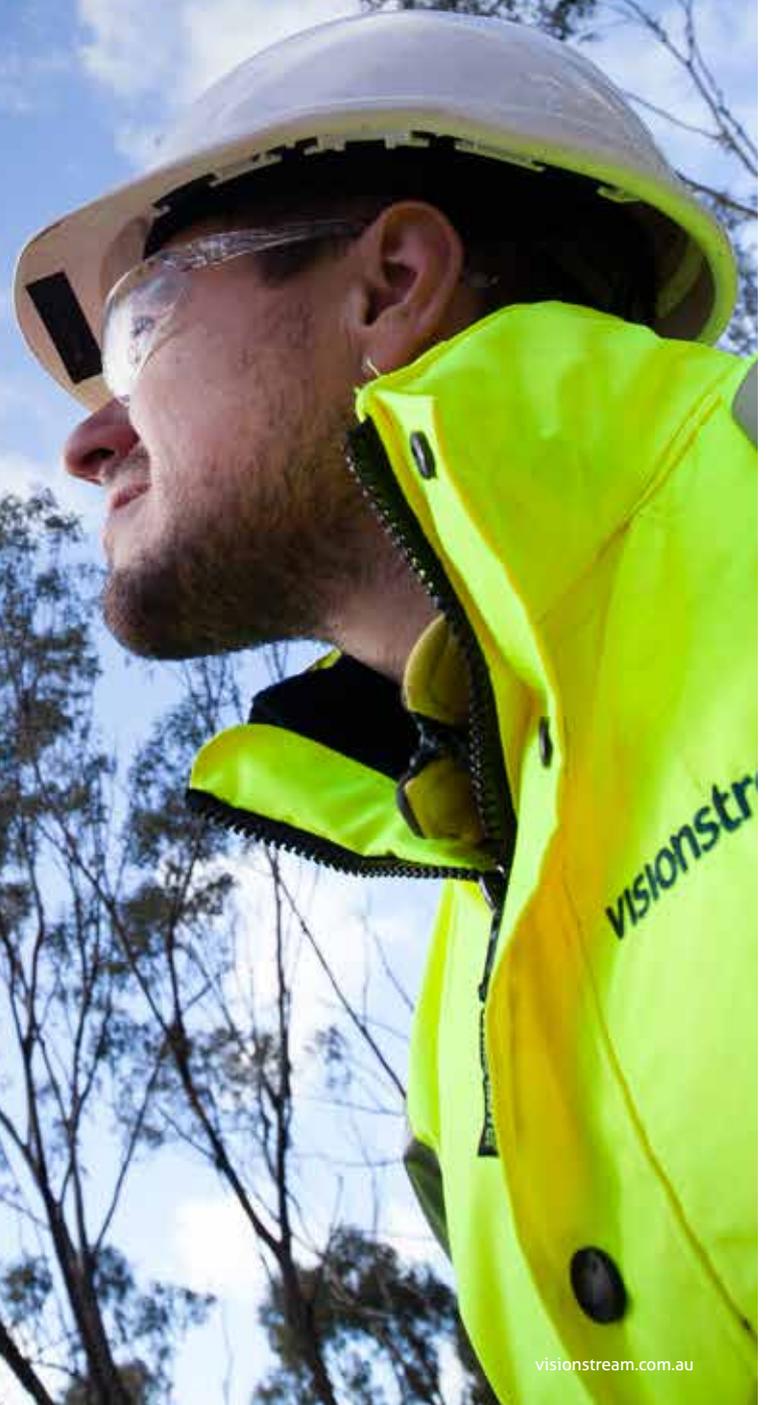

Visionstream operates under an Integrated Management System covering Safety, Environment and Quality that meets the requirements of:

- Comcare
- Commonwealth Work Health & Safety Act 2011
- Office of the Federal Safety Commissioner
- AS/NZS 4801:2001 Occupational Health and Safety Management Systems
- ISO 14001:2004 Environment Management Systems
- ISO 9001:2008 Quality Management Systems

Our safety, environment and quality management systems are externally accredited and our safety conscious culture encourages innovation in the field to further eliminate or minimise risks associated with the work performed.

Through strong leadership and individual commitment, we will continue to deliver projects without harm to people or the environment.

**Visionstream
partners with clients
across the public and
private sectors to
deliver whole-of-life
solutions that change
the way people live
their lives.**

Partnership means Leadership.

From concept and design, to construct and ongoing operations and maintenance, our expertly skilled teams can solve your challenge and provide support for the life of your solution.

We have extensive in-house capabilities across:

Network Design and Engineering

Having designed and delivered some of this country's largest network infrastructure projects, Visionstream is an industry leader in network design and engineering. Our integrated solutions span one or more technologies to deliver efficient, operable and scalable designs. Our approach to delivery is strategic, supported by high-level documentation, detailed designs, installation and commissioning specifications, and test result management.

Site Acquisition Environmental Design (SAED)

We know the importance of a seamless approach to access, environmental, cultural heritage and Native Title impact, no matter the size of your project.

Our teams specialise in Land and Sea Access and Acquisition, Environmental and Cultural Heritage. They are dedicated to the management of environmental issues, pre and post indigenous cultural heritage impacts, stakeholders and access agreements and leases, supported by detailed environmental impact assessments, management plans and transparent community consultations.

Operations and maintenance (O&M)

Engaging Visionstream to manage your network operations means you can focus on business strategy and customer service, and this means enhanced profitability and user experience.

We can improve operational efficiency, network quality and asset utilisation through:

- A Network Operations Centre (NOC): a 24 hour, 7 day a week facility designed to monitor, diagnose, record and control a diverse range of customer networks
- National Field Services: day-to-day, hands-on operation and management of entire network infrastructure
- Management: projects, assets and Tier 3 support tailored to our customers' needs.

Network construction:

Operating in both internal and external plant spaces our teams can provide the full spectrum of support to meet customer requirements, and regulatory and product guidelines from site surveys, design, construction and commissioning. Our deep experience extends across national fibre optic cabling and wireless turnkey solutions.

Where common infrastructure falls short, our services include power upgrades, superstructure, environmental, fire systems (includes VESDA), MDF compressions, asbestos removal, and recovery works.

**The result:
An unparalleled
customer partnership
that delivers market
leading solutions.
Every time.**

Delivering Real Results.

Our brand is more than just a name and logo. It is the essence of who we are. Every day it guides us in how we conduct ourselves and how we deliver service to our customers.

Our extensive experience, the innovative solutions we provide, and the results we deliver for customers are the foundations of our brand. Our work is guided by four core values; integrity, enterprise, excellence and leadership. On every project we bring these values to life through our agility and responsiveness, our collaborative approach, and our drive to deliver honest, valuable advice and support to our customers.

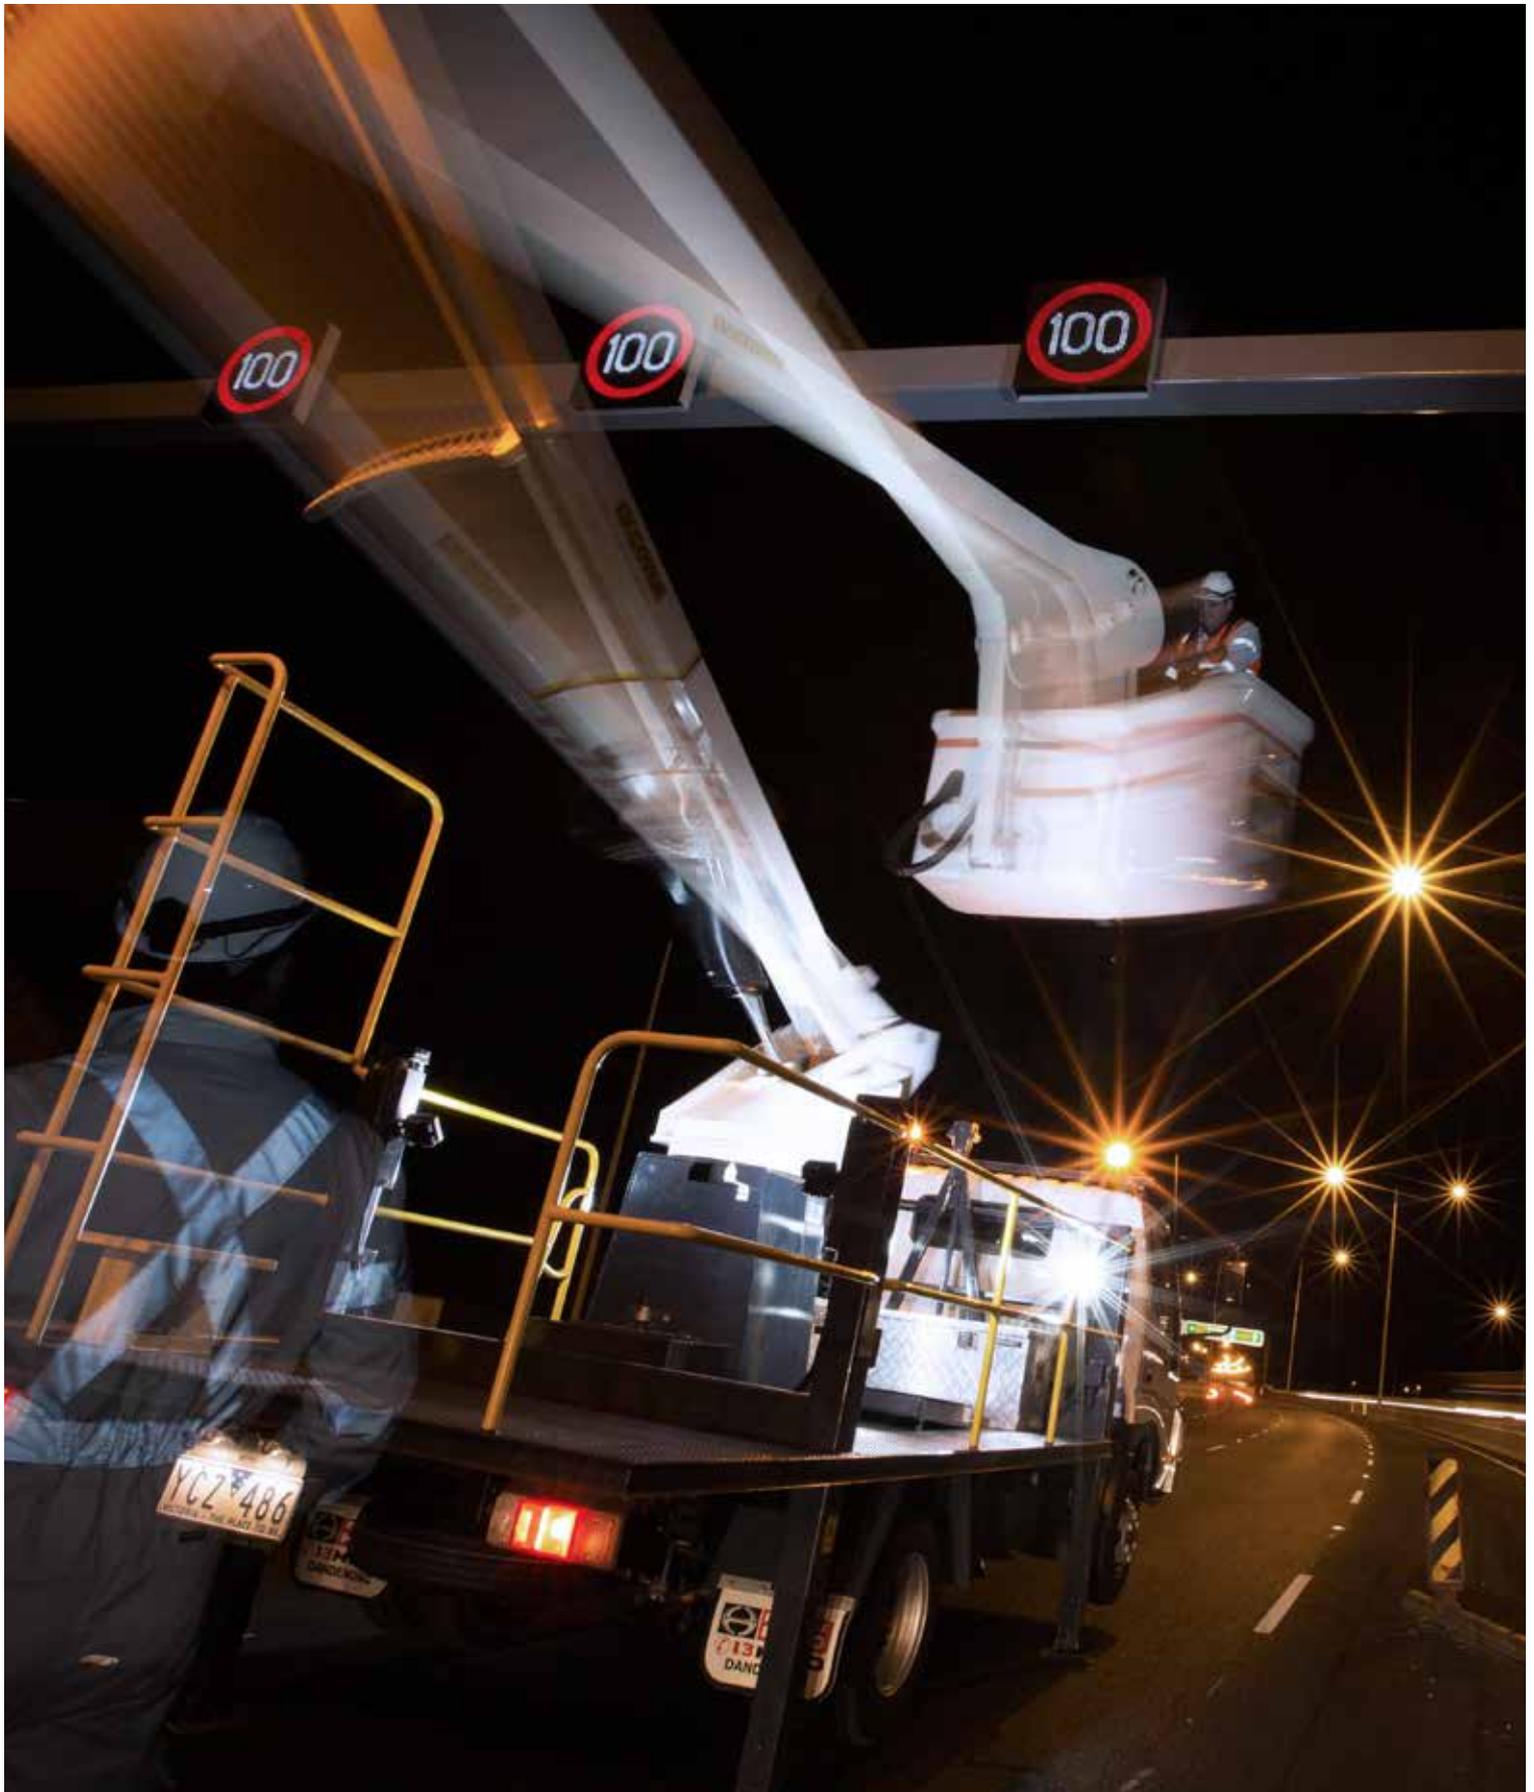

With a heritage in design, construction and maintenance services, Visionstream has been a trusted partner to leading telecommunication and ICT network providers for more than 20 years.

Established in 1994 as a subsidiary of Telstra to design and build the \$4 billion Telstra Cable TV Rollout, Visionstream was later acquired by Leighton Contractors, building an impressive track record in delivering telecommunications construction, maintenance and engineering services to customers across Australia and New Zealand.

In 2015, Visionstream's ownership changed following the formation of Ventia, a new, independent and dedicated services company, integrating Leighton Contractors Services, Thiess Services and Visionstream.

Ventia is now one of the largest services businesses in Australia with operations in Australia, New Zealand, New Caledonia and Papua New Guinea.

Visionstream is a major telecommunications player in the market, delivering Australia and New Zealand's telecommunications future.
